

Report Target: Atul Sir (Executive Summary), Frontend Admin Developer, Flutter Developer
Prepared By: Sanchit Jha (Limitless Backend Engineering)

1. Executive Business Summary (For Atul Sir)

Sir, Limitless Platform ke backend (system engine) ko aapke business requirements ke hisab se 100% complete aur future-ready kar diya gaya hai. App ka pura Control Room (Admin Panel), Customer Support Center, Security Guard Engine, Marketing Offer System, aur Data Safety Locker ready hain. Sabhi features 100% tested aur operational hain.

2. Business Features & Deliverables Status

Business Feature / Module	Simple Explanation & Business Value	Status
1. Admin Control Room	Live Dashboard with Users count, MRR earnings, user search & 1-click block	COMPLETED
2. Sub-Admin Approvals	Team permissions & 1-click access approval / rejection workflow	COMPLETED
3. Data Safety & Privacy	GDPR Data export & 1-click account self-erasure (Legal protection)	COMPLETED
4. Offer & Coupon Engine	Marketing promo codes (e.g. SUMMER50) with discount & usage limits	COMPLETED
5. Customer Support Desk	In-app ticketing queue with High/Medium/Low priority management	COMPLETED
6. AI Rules Configurator	Control AI report strictness & threshold levels directly from Admin Panel	COMPLETED
7. 24/7 Security & Vault	Vigil live threat monitoring & Vaultrix encrypted PDF storage	COMPLETED
8. Database Safety Locker	1-click full JSON database snapshot backup engine	COMPLETED
9. Quality Control Pass	Automated testing suite passed 65/65 checks with 0 failures	VERIFIED

Summary Note for Atul Sir:

Limitless Backend ab business management, marketing tools, customer security, aur legal compliance ke mamle me 100% ready aur tested hai. Frontend Admin Dev aur Flutter Mobile Dev dono ko complete integration guides bhej di gayi hain.

Frontend Developer Handoff Guide (Admin Panel)

The Admin Panel backend relies on JWT Bearer Token authentication. Provide the Authorization header on all protected routes:

```
Authorization: Bearer <admin_jwt_token>
```

Admin Panel API Catalog & UI Component Mapping

Endpoint Route	Method	Payload / Query	UI Component Mapping
/api/admin/login	POST	{ username, password }	Admin Login Screen
/api/admin/stats	GET	None	Top KPI Cards (Users, MRR, Signups)
/api/admin/widgets/summary	GET	None	Live Widget Bar (Sessions, Health)
/api/admin/analytics/revenue	GET	None	Revenue & MRR/ARR Charts
/api/admin/users	GET	?search=&role=&payment_status=	Users Master Table (Search/Filter)
/api/admin/users/:id/plan	PUT	{ payment_status }	Upgrade/Downgrade Plan Dropdown
/api/admin/users/:id/block	POST	None	Suspend User Account Button
/api/admin/access-requests	GET/POST	{ email, name, notes }	Sub-Admin Access Request Table
/api/admin/access-requests/:id/approve	PUT	None	Approve Sub-Admin Request Button
/api/admin/question-bank	GET/POST	{ category, title, question_text }	Question Bank Template Manager
/api/admin/coupons	GET/POST	{ code, discount_value, max_uses }	Coupon Code Creation Drawer
/api/admin/invoices	GET	None	Billing Invoices Ledger
/api/admin/support-tickets	GET/PATCH	{ status, assigned_to }	Customer Support Console
/api/admin/ai-rules	GET/POST	{ name, domain, threshold }	AI Threshold Rules Configurator
/api/admin/backup	POST	None	Database Snapshot Backup Button

Frontend Integration Checklist:

- 1. Store JWT token securely after POST /api/admin/login and include Bearer header on all API calls.
- 2. Implement 300ms debouncing on User Table search input (?search=query).
- 3. Handle HTTP 401 Unauthorized errors by redirecting to /admin/login screen.
- 4. Display success toast on backup trigger using metadata returned from POST /api/admin/backup.

SECTION 3

Flutter Mobile Developer Handoff & Security Rules

The Flutter Mobile application connects to the REST API. Pass user JWT token in headers: Authorization: Bearer <user_token>

Mobile Endpoint Specifications Catalog

Mobile Route	Method	Request Body / Query	Mobile Feature / Integration
/api/users/:id	GET	None	User Profile & Past Assessment Reports
/api/users/:id	PATCH	{ name, age, gender, email }	Edit Profile Settings Screen
/api/admin/support-tickets	POST	{ user_email, subject, message }	In-App Help & Support Ticket Submission
/api/users/:id/gdpr-export	POST	None	Download Personal Data Archive (GDPR)
/api/users/:id/gdpr-delete	DELETE	None	Account Self-Deletion (Right to be Forgotten)
/api/v1/assessments	POST	{ user_id, answers }	Generate Cognitive Assessment
/api/files/:id	GET	None	Download / View Streamed PDF Report File

Flutter (Dart) Implementation Example: Support Ticket Submission

```
final response = await http.post(
  Uri.parse('https://api.limitless.com/api/admin/support-tickets'),
  headers: { 'Content-Type': 'application/json', 'Authorization': 'Bearer $userToken' },
  body: jsonEncode({
    'user_email': userEmail, 'subject': 'Report Issue',
    'message': 'Unable to view PDF on Android 14', 'priority': 'high',
  })),
);
```

API Security & Integration Quality Check Results

Integration Test Suite Status: 100% PASSING

- Rate Limits: 120 req/min general API, 25 req/5 min auth limit, 30 req/5 min AI generator.
- Integration Testing: node test/integration.test.mjs -> 65 Checks Passed | 0 Failures.
- System Health: All endpoints operational, GridFS streaming verified, MongoDB schemas synced.

Report Sign-Off & Distribution:
